IN THE CLAIMS

The status of each claim is listed below.

Claims 1-27: Canceled.

28. (New) A fertilizer comprising an organic nitrogen-containing composition comprising fermentation mother liquor obtained by culturing the strain of *Enterobacter agglomerans* in a liquid medium the pH of which is adjusted to 5.0 or less, to allow L-glutamic acid to be produced and accumulated, which is accompanied by precipitation of L-glutamic acid, and then separating L-glutamic acid from the medium,

wherein the fertilizer comprises cells of a strain of *Enterobacter agglomerans* having L-glutamic acid-producing ability.

- 29. (New) The fertilizer according to Claim 28, wherein said strain can metabolize a carbon source in a liquid medium containing the carbon source and L-glutamic acid at a saturation concentration, and has an ability to accumulate L-glutamic acid at a saturation concentration, and has an ability to accumulate L-glutamic acid in an amount exceeding the saturation concentration.
- 30. (New) The fertilizer according to Claim 29, wherein a pH suitable for L-glutamic acid production by said strain is a pH at which L-glutamic acid precipitates in the medium, and L-glutamic acid is produced and accumulated, which is accompanied by precipitation of the L-glutamic acid, during the culture in the medium at the pH.

Application No. 10/077,745
Reply to Office Action of June 16, 2004

- 31. (New) The fertilizer according to Claim 28, wherein the percentage by mass of organic nitrogen with respect to the total solid matter is not less than 6% in said organic nitrogen-containing composition.
- 32. (New) The fertilizer according to Claim 28, wherein the percentage by mass of sulfate anion with respect to total nitrogen is 500% or less in said organic nitrogen-containing composition.

SUPPORT FOR THE AMENDMENTS

Newly-added Claims 28-32 are supported by the specification at pages 4-56 and by original Claims 1-7. No new matter is believed to have been added to this application by the amendments submitted above.
